Syros Healthcare

Website Management Guide

Where do form submissions go?

Appointments, contact and partnership enquiries, health package bookings, and job applications go to **admin@syroshealthcare.com** via FormSubmit. After a successful submission, visitors return to the homepage.

To activate the inbox, send a test enquiry, click **Activate Form** in the FormSubmit email, then send another test to confirm delivery. FormSubmit help

How to edit in GitHub

1. Sign in with repository access, open the file below and click the pencil icon.
2. To add an item, copy an existing entry from its opening brace **{** to its closing brace **}** and change the values. Edit an entry to update it or delete the whole entry to remove it. Keep a comma between entries and leave the last entry without a comma.
3. Click **Preview**, then **Commit changes**. If GitHub asks for a pull request, create it and merge it into **main** once approved. Check the page after the change is deployed.

Blog posts

Open blog posts in GitHub

In **articles**, edit the title, category, reading time, date (YYYY-MM-DD), card summary (**excerpt**) and cover image URL. A new post needs a unique **slug** for its page URL. Keep an existing slug to preserve the link.

Edit **sections** for the article body. Each section has a **heading** and **text**. In **sources**, use **label** and **url** for each reference. View Blog

Careers listings

Open job listings in GitHub

In **jobs**, edit the job title, location and description. Give each new listing an unused numeric **id**. Remove a listing when the role closes. View Careers

To add a role to the **Apply For** dropdown, open the application form file. Copy an option under Apply For and edit its value and displayed text.
