Syros Healthcare

Website Management Guide

Where do form submissions go?

Appointments, contact and partnership enquiries, health package bookings, and job applications are set up to go to **admin@syroshealthcare.com** via FormSubmit. After a successful submission, visitors return to the homepage.

Once the recipient change is live, send a test enquiry to trigger activation. Click **Activate Form** in the admin inbox, then send another test to confirm delivery. FormSubmit help

How to edit in GitHub

1. Sign in to GitHub with repository access and open the file below. Click the pencil icon (**Edit this file**).
2. To add an item, copy an existing entry from its opening brace **{** to its closing brace **}**, then change the values. Edit an entry in place to update it, or delete the whole entry to remove it. Keep a comma between entries and leave the last entry without a comma.
3. Click **Preview**, then **Commit changes** and enter a short message. If GitHub asks for a pull request, create it and merge it into **main** once approved. Check the page after the site deploys the change.

Blog entries

Open blog entries in GitHub

In the **articles** list, edit the title, category, reading time, date (YYYY-MM-DD), summary (**excerpt**), and cover image URL. Give new entries a unique **slug** such as **healthy-heart-tips**. The site displays these as summary cards. View Blog

Careers listings

Open job listings in GitHub

In the **jobs** list, edit the job title, location, and description. Give new listings an unused numeric **id**. Remove a listing when the role closes. View Careers

To add a role to the **Apply For** dropdown, edit the application form file. Under **Apply For**, copy an option in the relevant group and change both its value and its displayed text.
